# Java Environment

Jeffrey Miller, Ph.D. jeffrey.miller@usc.edu

HTTP://WWW-SCF.USC.EDU/~CSCI201

# Outline

- Java Environment
- Eclipse Tutorial
- Program

## History of Java

Java was created by Sun Microsystems

First version 1.0 was released in 1996

- Sun Microsystems was bought by Oracle in 2010
- Java has gone through numerous major and minor releases
  - Current major version is Java 8, released in 2013 with few updates since
- Java is open source
- http://java.sun.com

Java Environment USC CSCI 201L 3/23

## Compiling

- Java has a motto of "write once, run anywhere"
  - When code is compiled, it produces byte code instead of a binary executable
  - The Java Virtual Machine (JVM) is compiled for a specific operating system, then allowing for the byte code to run on any operating system (for which there is a JVM)
  - Since the JVM is written in a native language, there may be subtle, or not-so-subtle, differences when run on different JVMs
- Java may run slightly slower than compiled native languages

Java Environment USC CSCI 201L 4/23

#### **Command Line**

 You can write with any text editor you want and compile it from a command line that has the Java Development Kit (JDK) installed

```
C:\Users\jeff\Desktop\jeff\usc\2014 spring-cs201\lectures>javac HelloClass.java C:\Users\jeff\Desktop\jeff\usc\2014 spring-cs201\lectures>java HelloClass Hello Class!

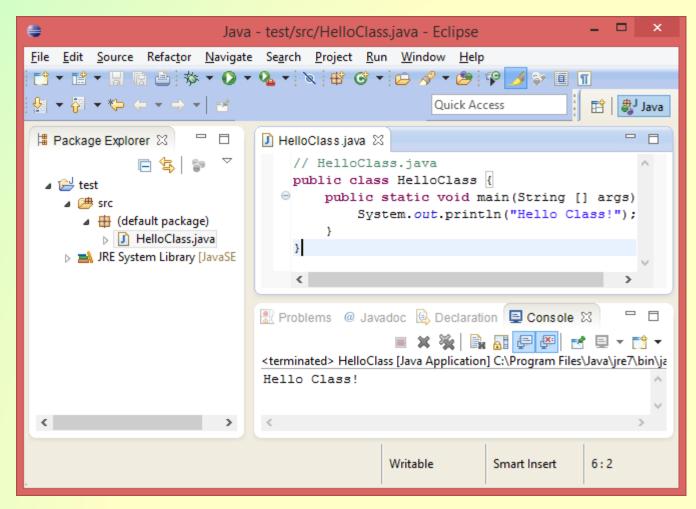

C:\Users\jeff\Desktop\jeff\usc\2014 spring-cs201\lectures>
```

Java Environment USC CSCI 201L 5/23

#### IDE

#### There are many Integrated Development Environments to use

- Eclipse
- NetBeans
- IntelliJ
- Visual J++
- Others?

# Outline

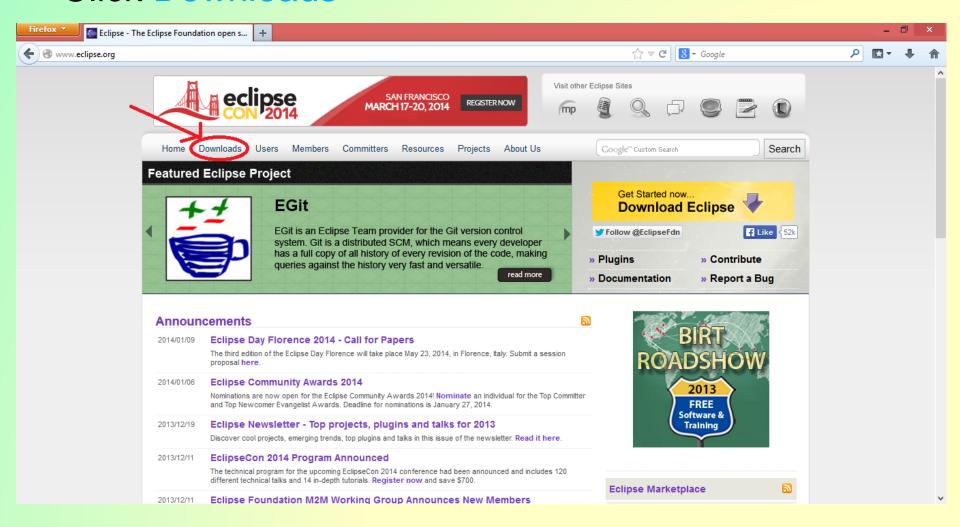

- Java Environment
- Eclipse Tutorial

Go to http://www.eclipse.org

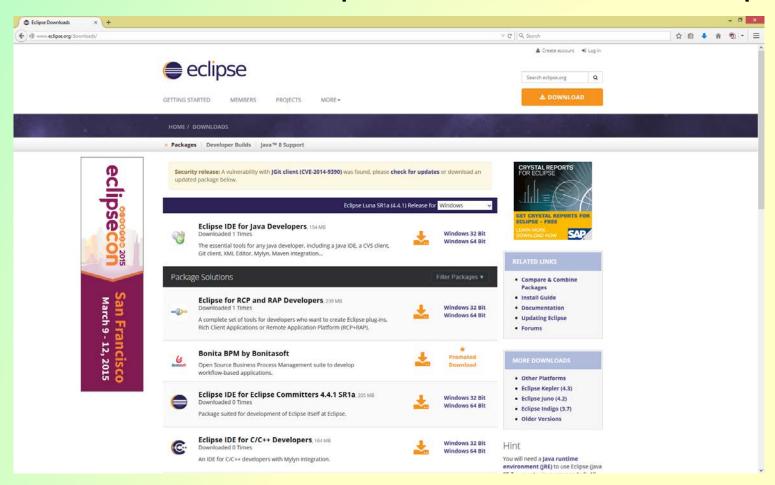

Eclipse Tutorial USC CSCI 201L 8/23

#### Click Downloads

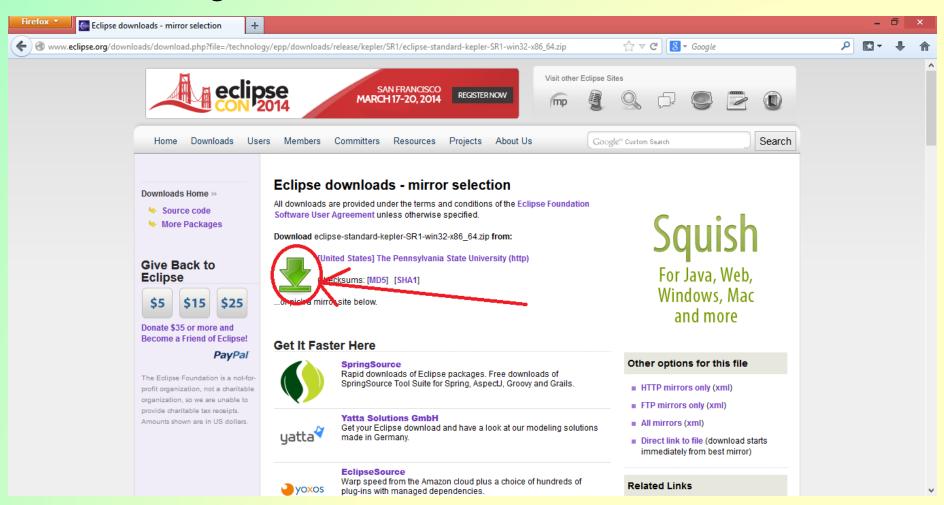

Eclipse Tutorial USC CSCI 201L 9/23

 Select your OS (if not already selected) then click the version for the Eclipse IDE for Java Developers

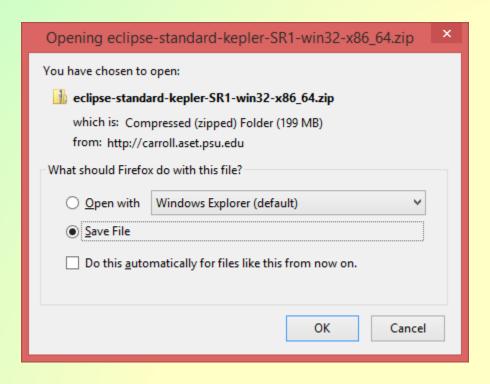

Eclipse Tutorial USC CSCI 201L 10/23

Click the green arrow next to the selected mirror

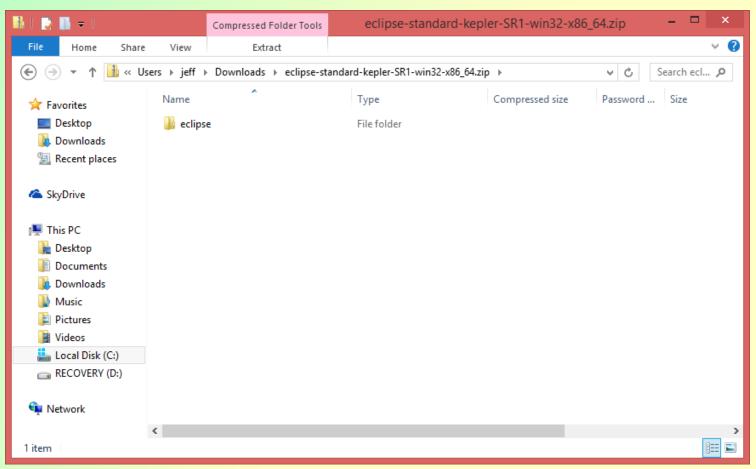

Eclipse Tutorial USC CSCI 201L 11/23

Save the zip file

Eclipse Tutorial USC CSCI 201L 12/23

 Open the zip file and drag the "eclipse" directory to your Desktop (or another directory of your choosing)

Eclipse Tutorial USC CSCI 201L 13/23

## Running Eclipse

 After the zip file finishes extracting, open the "eclipse" directory and run the eclipse executable

Eclipse Tutorial USC CSCI 201L 14/23

## Running Eclipse

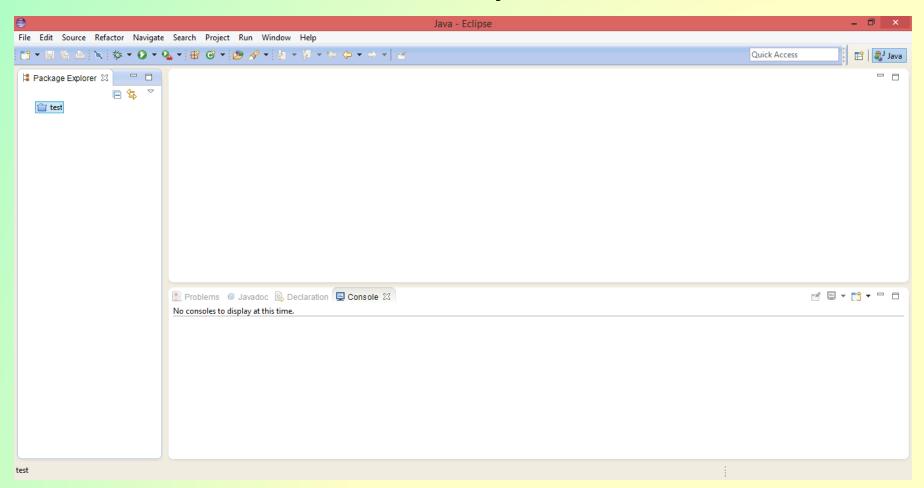

- Select a workspace directory
  - The workspace directory will be the one that contains all of your projects, code, and compiled files

Eclipse Tutorial USC CSCI 201L 15/23

## Creating a Project

Go to File->New->Java Project

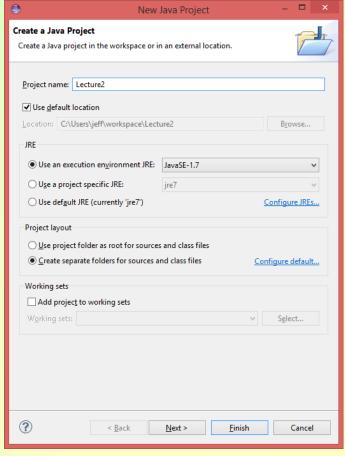

Eclipse Tutorial USC CSCI 201L 16/23

#### Create a Project

Type a name for the Project and click Finish

This has nothing to do with the code, but it should be descriptive enough for you to know what code is in the

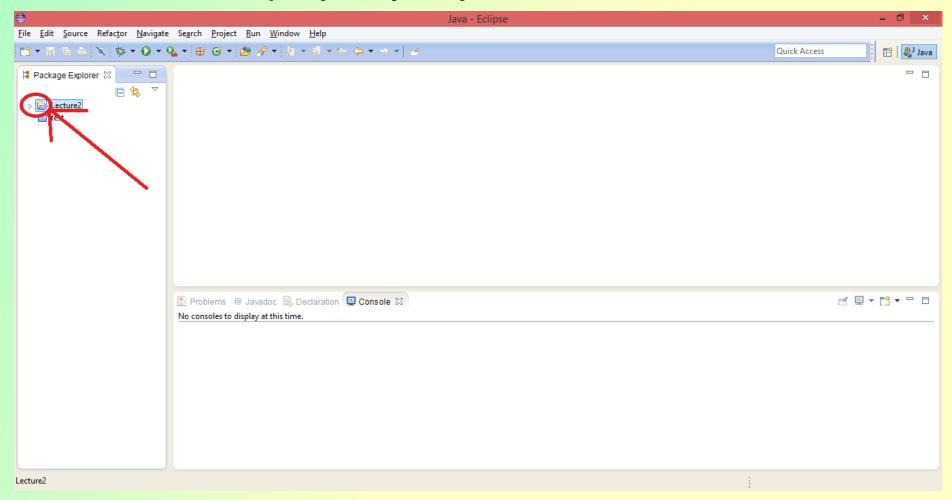

project

Eclipse Tutorial USC CSCI 201L 17/23

#### Create a Class

 Expand the Project by clicking the arrow next to the name of the project you just created

Eclipse Tutorial USC CSCI 201L 18/23

#### Create a Class

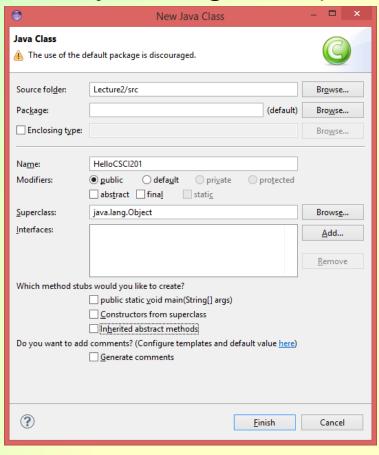

Right-click on "src" and go to New->Class

Eclipse Tutorial USC CSCI 201L 19/23

#### Create a Class

 Type a name for the class and uncheck all other boxes (unless you want Eclipse to generate code for you, which is always dangerous), then click Finish

Eclipse Tutorial USC CSCI 201L 20/23

#### Write Some Code

 You should now have a nearly-blank file and can begin writing code

Eclipse Tutorial USC CSCI 201L 21/2

#### Write Some Code

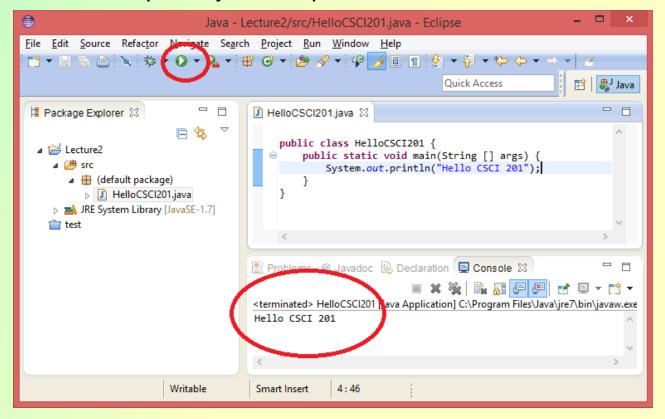

Type the following code into the HelloCSCI201.java file

Eclipse Tutorial USC CSCI 201L 22/23

#### Running the Code

- Click the green play button at the top to run your code
  - If your code doesn't compile, you will have error messages at the bottom of the screen
  - If your code compiles, your output will be at the bottom of the screen

Eclipse Tutorial USC CSCI 201L 23/2
